RE: Concrete Materials and Construction are an Essential Business Providing Critical Service to Iowans

Dear Governor Reynolds:

On behalf of the Iowa Concrete Paving Association and Iowa Ready Mixed Concrete Associations, we want to extend a sense of gratitude and appreciation for your leadership in confronting the COVID-19 epidemic. Your recent policy adjustments and continued work will help those that are suffering from the virus as well as their families and will help to minimize the virus' impact in our state.

As a result of discussions in Iowa and other states about what constitutes critical need sectors of our economy, we find it necessary to write you to be sure you and your team are aware of the essential need for continued operations of the concrete and construction industry.

As you know, the concrete materials and construction industry are critical for public works projects including roads, bridges, and energy production. Based on input from the CDC, OSHA has developed a hierarchy of industry risk for COVID-19. The lowest risk industries are those with workers that have "*minimal occupational contact with the public and other coworkers.*" Construction jobsites are not densely populated work areas. Construction sites are a unique workplace with their own levels of "social distancing" built in. Many workers are segregated completely or separated by large distances. Access to jobsites is under strict control and monitoring. Additionally, safety briefings are already part of the construction industry culture, and with the additional guidelines developed by OSHA to address COVID-19, briefings include the extra precautions recommended by the CDC and OSHA.

We ask that you join other states to treat construction and the delivery of construction materials as an essential service for the state and refrain from any action to curtail ongoing construction projects in your deliberations and planning for combating this virus. As higher risk industries are being impacted by the spread of COVID-19, it is more important to the long-term health of our economy to keep the construction industry intact. To date, California, New York, Illinois, Ohio, New Jersey, and Colorado have already deemed construction to be an essential service and have treated it as such in policy and regulations related to COVID-19. Pennsylvania has also permitted the continuation of emergency construction.

As you and your staff consider further economic orders that result in the shutdown of sectors of our economy, please be aware of the many, wide-ranging products that the concrete, aggregates, cement materials, and construction industries create as part of the supply-chain of critical need items.

We take the COVID-19 threat very seriously and have taken actions across the industry, as you have directed, ranging from social distancing and placing office workers in work-from-home situations.

We urge you to directly contact me or other industry leaders when considering any additional closures of Iowa's concrete industry. We will make ourselves available to communicate 24-hours-per-day, 7 days-per-week to help your office make the best decision for Iowa residents.

Contact me at any time at 515-450-9236 or gmulder@concretestate.org

Respectfully,

A handwritten signature in black ink, appearing to read "Greg Mulder", enclosed in a thin black rectangular border.
