

FIRE SAFETY DOESN'T HAVE TO COME AT A PRICE FOR L.A. COMMUNITIES.

Two analyses show costs of using non-combustible building materials are either on par or less than wood.

Using non-combustible materials has been proven to save lives. But too many communities have been relying on wood construction because they believe it saves money for multi-family buildings. Analyses using *Dodge Data & Analytics (DDA)* and *RS Means* demonstrate that affordability of non-combustible construction in L.A. is virtually the same as building with wood. The results mean local construction and developers thrive, while residents and businesses stay protected.

Analysis #1: HISTORICAL COSTS

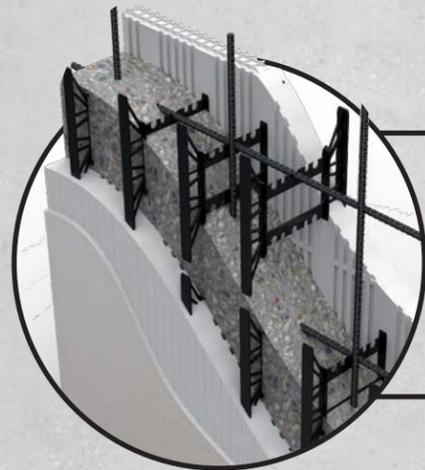

Analysis #2: ESTIMATED COSTS

A comprehensive analysis using *DDA* data for 1-7 story buildings built in Los Angeles from 2014-2019 2nd Quarter (representing 826 projects). The takeaway? Non-combustible buildings (concrete and masonry) cost 4.7% less to build than combustible (wood) buildings.*

A comprehensive cost estimate using *RS Means* for a typical four-story, 100,000 square-foot apartment building located in Los Angeles. The building consists of 92 apartments, 60 one-bedroom apartments, and 32 two-bedroom apartments. The analysis indicated that the costs for non-combustible construction (concrete) are virtually the same as combustible (wood) construction.**
